Easysoft are the only independent vendor to support all versions of Tabular Data Stream (TDS) from 7.0 right up to the current release.

Keeping up with features you care about

Like other database vendors, Microsoft constantly update their product to take advantage of the latest technologies and computing processes, and Easysoft always keep pace with their developments.

As a part of the Microsoft Development Network we get easy access to the latest releases, from these we ensure that our Driver works with new SQL Server functionality as they are released – so for example with SQL Server 2014, we quickly ensured that we supported a number of key new features (i.e. In-Memory Tables, Updateable Columnstore Indexes, AlwaysOn Availability Groups and new security features etc) – in fact we were the first independent vendor to support this new functionality.

Our speed of response means that our customers can upgrade their own networks safe in the knowledge that they will continue to be supported by our Driver.
